Changes for the Better
FACTORY AUTOMATION

## Low Voltage Air Circuit Breakers

WS
Series

Empowering Industries

## Mitsubishi Presents the WS Series, Satisfied with the High Demands of the 21st Century Global Market.

## High-Reliability

Customer Friendly

Line up ( 630 to 6300A )

## Best Solution

Through Flexible and Various Options,To be Built up the Suitable Functions.

## Electronic Trip Relay

## Main setting module

1
With interchangeable \& add-on modules, flexible functions built up.

Protection with power from Internal CT
The Over current protection and Ground fault protection can work with power from Internal CT, even if the control power source is off. For the Trip indicator LED and the additional functions like EX1, DP1/DP2, TAL and Network, the control power source is required.

## ■Secure protection by actual effective value detection

 For spread of electronic devices such as inverter, the actual effective value detection method is adopted, which is strong against deformed waveform and is detected from each phase independently .

WS relay with ampere meter and fault memory (DP3)

Displays Current, Harmonic, Trip current, Trip cause,etc. Note : Refer to page 23 on details.

Network

## Interface unit

CC-Link® PROFIBUS-DP
MODBUS®(RS-485)

## Communication items

| Measurement / Alarm | Current, Voltage*, Power*, Harmonics*, etc. |
| :--- | :--- |
|  | Tripping cause, Tripping current |
|  | Alarm (PAL, TAL, Self diagnosis, etc.) |
| Breaker status | ON and OFF by CC and SHT |
|  | Spring charge by MD |
|  | ON or OFF or Charge state |
|  | Drawout position |
|  | ETR Setting value |

Note*: The VT unit is required to display the measured data except for the load current.

## Display unit for Panel board

DP2
It has the same function as the breaker display unit (DP1).
In the case where the breaker is installed in the panel, it becomes possible to view the measurement information from the outside of the panel board.

Note : The VT unit is required to display the measured data except for the load current

## VT unit

VT
VT unit enables to measure voltages, electric powers, harmonics and etc.

## Electronic Trip Relay type code

## Product Features

## ■ High-Performance High-Reliability The safety of valuable circuits can be securely maintained.

Higher short circuit protection performance by improving breaking capacity
In case of 690V AC, Icu = Ics improved from 50 kA to 65 kA for AE630-SW~AE2000-SWA from 50 kA to 75 kA for AE2000-SW~AE4000-SWA from 50 kA to 85 kA for AE4000-SW~AE6300-SW

Higher safety by improving insulation performance

Rated impulse withstand voltage (Uimp) for the main circuit is improved from 8 kV to 12 kV .

Wide coordination range by improving rated short-time withstand current

Icw (1s) improved
from 65 kA to 75 kA for AE2000-SW~AE4000-SWA
from 85 kA to 100 kA for AE4000-SW~AE6300-SW

ICW (1s) (Rated short-time withstand current)

Icw

Higher reliability by High operating durability

- Mechanical

AE-SW series are sharply improved in mechanical durability compared to the former model.

Former model
AE-SW series

## - Customer Friendly

## Convenience for Customer

3 sizes

Replacement from the former model (AE-SS)
D Due to the same installation dimension and outline dimension, the former model (AE-SS) can be replaced with AE-SW series.

- For the replacement of Drawout type, the Drawout fames (Cradle) for AE-SS have to be replaced with one for AE-SW.

AE-SW can be installed to the existing connection bus bar without any special connection kit.
(Except for AE2000-SWA and AE4000-SWA)

Replacement from the old model (AE-S)
For the replacement from the old model (AE-S), the special adapter for AE-SW is prepared. (It is available for Drawout type only.) For details, please contact us.

## Zero arc space

Arc exhaust to the outside of the breaker is drastically reduced for safer operation.
(For AE630-SW~AE4000-SWA models, 600V AC or less)
(Refer to page 58 : Insulation distance)

## Compact size AE2000-SWA!

The compact AE2000-SWA can reduce the panel size.

## Reverse connection available

Line and Load are not defined on the Main circuit terminals. Therefore, reverse connection is available without any limitation.

## Appearance and Product structure

## Fixed type

|  |  | Cradle only |  | 3-pole | 26 |  |  |  |  |
|  |  | 4-pole | 30 |  |  |  |  |
| Marine approval |  |  |  | 3 -pole |  |  | (LR, BV, DNV GL, ABS, NK, CCS) |  |  |  |  |

(Note 1) This is the Icu value when the bare main body and the external relay are combined.
(Note 2) The number of operating cycles without rated current also includes the number of operating cycles with rated current.
(Note 3) AE2000-SWA, AE4000-SWA and AE4000-SW~AE6300-SW apply for only vertical terminal of connecting terminal.
(Note 4) This value is max. operating cycle for just ACB body without any accessories.
(The max. operating cycles for the accessories like AX, MD, CC, SHT and UVT are half of this value.)
(Note 5) Products with low rating types are available. For AE630-SW low rating types ( $250 \mathrm{~A}, 315 \mathrm{~A}, 500 \mathrm{~A}$ ), DP3 is not available.

[^0]

## Connections

## Over view (AE630~1600-SW, AE2000~3200-SW)

## Manual charging

The closing spring is charged by the manual charging handle. The breaker is closed when the ON button is pressed, and opened when the OFF button is pressed.

When the closing spring is completely charged, the charging indicator will show "CHARGED".

- The indicator shows the ON or OFF state of the main contacts.
- The breaker cannot be closed while the OFF button is being pressed. (Safety design)
- OFF lock is enabled by padlock (See P7, P17) as standard.

1

OFF charging method

OFF charging method is also available. The closing spring is charged automatically when the breaker is opened. This is available only by externally connecting $b$ contact (AXb) of the auxiliary switch to the motor charging circuit in series. In case of DC power supply, please use high capacity auxiliary switch (HAX).

## Motor charging device (MD)

Option

The closing spring is charged by an electric motor. When the breaker is closed, the spring is charged automatically (ON-charge method). The closing coil (CC) is required to remotely close the breaker, and the shunt trip device is required to remotely open the breaker.

- Manual charging operation is also possible.
- Pumping prevention is assured both electrically and mechanically.
- As the charging completion contact is separate from the electrical charging circuit, its function in the control scheme can be arranged as desired.

Polarity of DC circuit use

Motor charging rating

| Rated voltage (V) | Applicable voltage range (V) | Applied voltage (V) | Inrush |  | Steady current (A) | Charging time (s) | Criterion for power requirement (VA) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Current (Peak value) <br> (A) | time <br> (s) |  |  |  |
| 24DC | 18~26.4 | 24 | 22 | < 0.4 | 6 | $\leq 5$ |  |
| 48DC | 36 ~ 52.8 | 48 | 14 | < 0.4 | 3 |  |  |
| AC/DC | $85 \sim 137.5$ | 100 | 10(10) | $\begin{aligned} & \mathrm{AC}:<0.45 \\ & \mathrm{DC}:<0.25 \end{aligned}$ | 3(4) |  | 700 |
| 100-125 |  | 125 | 12(12) |  | 3(4) |  | 1000 |
| AC/DC | 170 ~ 275 | 200 | 5(7) | $\begin{aligned} & \mathrm{AC}:<0.45 \\ & \mathrm{DC}:<0.25 \end{aligned}$ | 1(2) |  | 700 |
| 200-250 |  | 250 | 6(8) |  | 1(2) |  | 1000 |

Values in parentheses show values for AE4000-SWA 4 pole and AE4000-SW ~
AE6300-SW.
We cannot manufacture AE4000-SWA 4 pole and AE4000-SW ~ AE6300-SW in 24 V DC and 48V DC rating.

Charging completion contact rating

| Voltage (V) |  | Current (A) |  |
| :---: | :---: | :---: | :---: |
|  | Resistance load | Inductive load |  |
| AC | 460 | 5 | 2.5 |
|  | 250 | 10 | 10 |
|  | 125 | 10 | 10 |
| DC | 250 | 3 | 1.5 |
|  | 125 | 10 | 6 |
|  | 30 | 10 | 10 |

## Accessories (for breaker unit)

## Closing coil (CC)

## Option

## Shunt trip device (SHT)

The shunt trip device is a device to open the breaker by remote control. A cut-off switch is included.

| Rated voltage (Applicable voltage range) | Operating voltage . Operating inrush current (VA) |  | Operating time (Note1) |
| :---: | :---: | :---: | :---: |
|  | AC | DC |  |
| $\begin{aligned} & 24-48 \mathrm{~V} D \mathrm{DC} \\ & (16.8 \sim 52.8) \end{aligned}$ | - | 24V DC 2.5A (100W) | $0.04 \mathrm{~s}$or less |
|  | - | 48V DC 6.0A (200W) |  |
| 100-250V ACcommon$(70-275)$ | 100 V AC 0.4 A ( 100 VA ) | 100 V DC 0.6A (100W) |  |
|  | 250 V AC 1.4 A (150VA) | 250 V DC 1.6A (200W) |  |
| $\begin{gathered} \hline 380 \sim 500 \mathrm{~V} \text { AC } \\ (266 \sim 550) \end{gathered}$ | 380 V AC 0.5 A (250VA) <br> 500 V AC 0.7 A (300VA) | - |  |

Note 1) In case of double rating of rated voltage, it is the value for the lower rating.
(Example) In case of $24-48 \mathrm{~V} D$, it is operating time for 24 V DC.
Note 2) Operating time for AE4000-SW~AE6300-SW is 0.05 s or less.

Diode rectifier is not used for control source $24 \sim 48 \mathrm{~V}$ DC.

OCR alarm (AL) is provided as standard if ETR is equipped. OCR alarm (AL) is the contact (1a) of short-time operation $(30 \mathrm{~ms})$, being output when the breaker is tripped by the electronic trip relay. Two types of automatic reset type (standard) and manual reset type (optional) are available. When ordering, specify either automatic reset or Manual reset.
Switch rating

| Voltage (V) |  | Current (A) |  |
| :---: | :---: | :---: | :---: |
|  | Resistive load | Inductive load |  |
| AC | 240 | 3 | 2 |
|  | 125 | 5 | 3 |
| DC | 240 | 0.2 | 0.2 |
|  | 125 | 0.4 | 0.4 |
|  | 30 | 4 | 3 |

Note1) Though the control power supply is unnecessary to activate OCR alarm (AL), the self-holding circuit is necessary since the contact output is activated for the short time ( 30 ms )
Note2) This works when tripping occurs in LTD, STD, INST, GFR or ER.
Note3) If any continuous output of OCR alarm (AL) is necessary, use the trip indicator (TI) output contact of the electronic trip relay. Choose P3, P4 or P5 for power supply type.

## OCR alarm (AL) [mRE : Manual reset type]

On the manual reset type (optional), the gray manual reset button on the front side of the breaker will stick out to continuously output OCR alarm (AL) if the breaker is tripped by the electronic trip relay. After tripping, the breaker can not be turned on unless the manual reset button is pressed for resetting.

## Auxiliary switch <br> Standard (AX) • High capacity type (HAX)

This is the contact that remotely indicates the ON or OFF status of the breaker.

- The a and b conacts may turn simultaneously to ON instantaneously at the time of changing the contact; Pay attention to the contact state when designing circuits.
- The chattering time at the time of contact ON-OFF is below 0.025 s .

## Accessories (for breaker unit)

## Mechanical interlock (MI)

This is the device to prevent parallel charge of 2 or 3 units of breakers, and it can interlock the breakers mechanically without fail.
All combinations are available among any models from AE630-SW to AE6300-SW.
Please make inquiries about installation to AE4000-SW~AE6300-SW.
Further the interlock is possible among the different connection types or poles, such as fixed type or drawout type, 3 pole or 4 pole.
In combination with electric interlock, the higher safety interlock system can be secured.

- For drawout type, the interlock works at "CONNECTED" position, and in another position the interlock is released, which assures easy maintenance and inspection of the breaker.
- When turning OFF one breaker and then turning ON another breakers, please take an interval 0.5 seconds or more.
- MI for 3 breakers can not be installed by combining with Door Interlock (DI).

Breaker layout(630AF-4000AF)

## Condenser trip device (COT)

Please prepare by the customer. Refer to Page 13 for the specifications of combined SHT.

## Dust cover (DUC)

Dust cover prevents the dust or water entering into the panel board from the breaker panel cut. Protection degree is IP54.

## Accessories(for drawout type)

## Drawout interlock (standard equipment)

This is the safety device that prevents insertion and drawout operation. When the breaker is ON , the drawout handle cannot be inserted, and insertion and drawout operation cannot be done unless the OFF button is pressed.

## Position lock (standard equipment)

This is the device that locks automatically the drawout mechanism at "TEST" or "CONNECTED" positions during insertion and drawout operation. When the lock plate is pushed in, lock is released and operation can be continued.

Outline dimensions (reference)

## Padlock

* This padlock should be supplied by customer.

A padlock can be arranged at the lock plate. Thereby, it is possible to prevent the connection position from being changed unnecessarily.
As for outline dimensions of the padlock, please refer to the left figure.

## Operating position of drawout type

Ground terminal is on right side of the cradle.

## Cell switch (CL)

This is the switch to show the drawout position (CONNECTED, TEST, and DISCONNECTED) of the breaker. An arbitrary combination up to 4 pieces is available.

Note 1: The setting can be changed by customer later. A preliminary setting of CL at factory shipment is as follows. CL1:1C CL2:1C1D CL3:1C1T1D CL4:2C1T1D
Switch rating

| Voltage (V) |  | Current (A) |  |  |
| :---: | :---: | :---: | :---: | :---: |

| CL2 | 1 | - | 1 |
| CL3 | 1 | 1 | 1 |
| CL4 | 2 | 1 | 1 |

## Shorting b-contact (SBC)

When moving the breaker from the connected to the test positions, this contact is used to short circuit auxiliary switch ( AXb ), thus maintaining the correct sequence of operation of the external control circuit. When ordering, SBC with the same number of contacts as auxiliary switches (AXb) will be provided.

Switch rating

| Voltage (V) |  | Current (A) |  |
| :---: | :---: | :---: | :---: |
|  | Resistive load | Inductive load |  |
| AC | 250 | 10 | 2 |
|  | 125 | 10 | 3 |
| DC | 250 | 0.2 | 0.2 |
|  | 125 | 0.4 | 0.4 |
|  | 30 | 4 | 3 |

Refer to the Min. load range graph in Page 14.

## Lifting hook (HP)

## Option

This is the metal fitting to suspend the main body when the breaker is removed from the drawout cradle. The fixed type breaker is equipped with HP as standard.

## Safety shutter (SST)

Option

The safety shutters cover the conductors (cradle side) and prevent contact with them when the breaker is drawn out.

## Safety shutter lock (SST-Lock)

## Option

This kit is used to lock the safety shutters using 2 padlocks (the padlocks to be customer's supply). The safety shutters close when the breakers are drawn out to prevent accidental contact with the main contacts.

## Mis-insertion preventor (MIP)

## Option

This prevents other breakers unspecified from inserting into the cradle, and 5 patterns in maximum are available.
Not available for AE4000-SW~AE6300-SW

## Test jumper (TJ)

With the breaker taken out of its cradle, this device enables the breaker to be electrically opened and closed, and the operating sequence to be checked. 3 m cable is equipped as standard shipment.

## Electronic trip relay(Feature)

Several measuring data (current, voltage, power etc) and alarms/can be displayed with this module.Extension module (option)
This module is required to install VT unit, display module and each interface unit.

Load current LED (standard)
This indicator shows the actual current-carrying level.
RUN and ERR. LED (standard)
This indicator displays the ETR situation (Run or Error)Trip indicator LED (standard)
This indicator displays the trip cause. (Self-holding type) If output contact for this Trip indicator is required, Power supply module should be selected from P3, P4 or P5.

## OCR alarm (AL) (standard)

When tripped by Over current, Ground fault (GFR) and Earth leakage (ER), this device outputs alarm signal.
There are two types of OCR alarms. One is Automatic reset type with 30ms one pulse output (standard) and the other is Manual reset type with self-holding (optional). For details, refer to Page 14.

Neutral pole overcurrent protection (NP) (standard)
When Harmonics in load current become higher, the current on Neutral pole may exceed the rated current. This Neutral pole overcurrent protection prevents the troubles caused by higher Harmonics.

## Electronic trip relay (ETR) Type designation breakdown

Characteristic table

|  | NA <br> Nothing | G1 <br> Ground fault | E1 <br> Earth leakage | $\mathrm{AP}$ <br> 2nd additional Pre-alarm | N5 Neutral pole $50 \%$ protection |

| - | Pre-alarm time | Tp | 1/2 TL at IL $\times 1.2$ (after 1/2 TL, PAL contact output turns on.) | $\pm 20 \%$ | - |

The table and the figure include both optional display and MCR.
For WM relay only, when Pre-alarm current Ip is set at "OVER", the Ip value becomes equal to "IL x 1.0 ".

■Operating characteristic curve (for generator protection use :WM)

## Electronic trip relay (for special use : WB)

This WB relay is effective for the combination with the external OCR without severely decreasing the breaking capacity.
Actually, if ACB is combined with the external OCR only without WB relay, its breaking capacity comes to be reduced drastically. (e.g. For AE1600-SW, it's reduced to 25kA.)

Note: The figure shows WB1 type with MCR switch. MCR is optional equipment.

Relation of setting dial

Adjustable setting range

| No. | Setting item | Mark | Adjustable setting range | Accuracy | Factory default value |

The table and the figure include both optional display and MCR.
For WF relay, when Pre-alarm current Ip is set at "OVER", the Ip value is "Ir x 1.15".

■Operating characteristic curve (for protective coordination use : WF)
[LTD curve setting " $\mathrm{a}=0.02$ "]

[LTD curve setting "a=3"]

Note 1: LTD operating time tLTD is calculated by the following equations.

The accuracy of operating time is $\pm 30 \%$ ( $1.5 \mathrm{Ir} \leq$ load current $<41 \mathrm{r}$ ) or $\pm 20 \%$ ( $41 \mathrm{r} \leftrightarrows$ load current),
Note 3: When Tsd $=$ " 0.06 " setting, operating time is $0.04 \sim 0.08 \mathrm{~s}$.
[LTD curve setting "a=1"]

[LTD curve setting " $\mathrm{a}=4$ "]

Note 2: PAL operating time tPAL is calculated by the following equations.
$\mathrm{tPAL}=\frac{(4 \mathrm{II} / 0.97 \mathrm{Ip})^{\mathrm{a}}-1}{(1 / 0.97 \mathrm{IP})^{\mathrm{a}}-1} \times \frac{\mathrm{TL}}{2}\left(\begin{array}{l}a=\operatorname{LTD} \text { curve setting } \\ 1=10 \operatorname{load} \text { current (A) } \\ \mathrm{Ip}=0.68 \sim 1.15 \times \operatorname{lr}(\mathrm{A})\end{array}\right)$
TPAL $=\frac{(I / 0.97 \mid p)^{\mathrm{a}}-1}{(1)} \frac{\mathrm{L}}{2}\binom{\mathrm{Ip}=0.68 \sim 1.15 \times \operatorname{lr}(\mathrm{A})}{\mathrm{TL}=1 \sim 18(\mathrm{~s})}$
The accuracy of operating time is $\pm 30 \%$ ( $1.51 \mathrm{r} \leqq$ load current $<4 \mathrm{lr}$ ) or $\pm 20 \%$ ( $4 \mathrm{r} \leqq$ load current)
PAL operating time is 0.5 s (FLAT) when the operating time becomes 0.5 s or less.

## Electronic trip relay

## Accessories

## Ground fault protection (GFR)

The ground fault protection (GFR) of several hundred amperes is possible. This function can be selected for trip and alarm (no trip). Power supply is necessary for this function, even if there is not power supply, it can function at $0.2 x$ In or higher.

| Setting item | Mark | Adjustable setting range | Accuracy | Factory <br> default value |
| :--- | :--- | :--- | :--- | :---: |
| GFR pick-up current | $\operatorname{Ig}$ | $0.1-0.2-0.3-0.4-0.5-0.6-0.7-0.8-0.9-1.0 \times \mathrm{In}$ | $\pm 20 \%$ | 1.0 |
| GFR time | $\operatorname{Tg}$ | $\frac{3-1.5-0.8-0.5-0.3-0.15-<0.1-<0.1-0.15-0.3-0.5-0.8-1.5-3 \mathrm{~s}}{\text { TRIP }}$ | $\pm 20 \%$ | 3 s (TRIP) |
| (at $1.5 \times \mathrm{Ig})$ | $\pm$ |  |  |  |
| alarm output | - | TRIP side : Self-holding/ALARM side : Automatic reset | - | TRIP side <br> (Self-holding) |

## Neutral CT (NCT) ※Only use for AE-sw

## Option

The Neutral CT is used for ground fault protection when the 3 pole breaker is used on a 3 phase 4 wires system and for over current protection on N phase. Please use this CT in combination with ground fault protection (GFR). As for outline dimensions, refer to page 54. The length of the cable (attached) for NCT is 2 m .

Block diagram with NCT function

NCT type name

| NCT type name | ACB type name / CT rating |  |
| :---: | :---: | :---: |
| NCT06 | AE630-SW 630A |  |
| NCT10 | AE1000-SW 1000A |  |

| NCT63 |  | AE6300-SW 6300A |

## Earth leakage protection (ER)

By combining the ETR with earth leakage protection (ER) and External ZCT, earth leakage protection is possible. Earth leakage protection, earth leakage tripping and earth leakage alarm can
 be selected. Control supply is necessary for this function.

| Setting item | Mark | Adjustable setting range | Accuracy | Factory <br> default value |
| :--- | :--- | :--- | :---: | :---: |
| ER pick-up current | I $\Delta \mathrm{n}$ | $1 \mathrm{~A}-2 \mathrm{~A}-3 \mathrm{~A}-5 \mathrm{~A}-10 \mathrm{~A}$ | 0 <br> $-30 \%$ | 10 A |
| ER time | Te | $\frac{3-1.5-0.8-0.5-0.3-0.15-<0.1-\frac{0.1-0.15-0.3-0.5-0.8-1.5-3 \mathrm{~s}}{\text { TRIP }}}{\text { ALARM }}$(at $1.5 \times \mathrm{I} \Delta \mathrm{n})$ | $\pm 20 \%$ | 3 s (TRIP) |
| alarm output | - | TRIP side : Self-holding/ALARM side : Automatic reset | - | TRIP side <br> (Self-holding) |

## External ZCT

This option is used to detect several amperes of earth leakage when used in combination with a electronic trip relay that has the earth leakage tripping (ER) option.
Two methods are available. The first is where the all load conductors pass through the ZCT.
The other method uses a smaller ZCT through which the supply transformer's ground wire passes through to the earth.

ZCT for load circuit

| ZCT type name | ACB type name |
| :---: | :---: |
| ZCT163 | AE630-SW ~ AE1600-SW 3-pole |
| ZCT323 | AE630-SW ~ AE1600-SW 4-pole <br> AE2000-SW ~ AE3200-SW 3-pole |
| ZCT324 | AE2000-SW ~ AE3200-SW 4-pole |

As for outline dimensions refer to page 54. Make a choice of suitable ZCT in comformity to the BUSBAR size.
ZCT for transformer ground wire

ER function block diagram (for load circuit method)

ER function block diagram (transformer ground wire method)

## Electronic trip relay

## Accessories

## 2nd Additional Pre-alarm (AP)

The Pre-Alarm (1st) function is already installed in standard breaker, the 2nd additional Pre-Alarm function can be installed as option, thereby it is possible to monitor (observer) electric circuit in more detail by 2 nd additional Pre-Alarm function.

| Setting item | Mark | Adjustable setting range | Accuracy | Factory default value |
| :---: | :---: | :---: | :---: | :---: |
| 2nd Additional Pre-alarm pick-up current | Ip2 | 0.5-0.6-0.7-0.8-0.84-0.88-0.92-0.96-1.0 $\times$ lu WS | $\pm 10 \%$ WS | 1.0 |
|  |  | 0.5-0.6-0.7-0.8-0.84-0.88-0.92-0.96-1.0 x IL WM | $\pm 5 \%$ WM |  |
| 2nd Additional Pre-alarm time | Tp2 | $\frac{0.9-0.8-0.7-0.6-0.5-0.4-0.3 \times T L}{(\times \mathrm{TL})}-\frac{5-10-15-20-30-40-60 \mathrm{~s}}{(\mathrm{FLAT})}$ | $\pm 20 \%$ | 0.9 ( XTL ) |

## <Pre-alarm timing chart>

PAL LED starts to blink at time when the actual current exceeds the setting current. Then after it passes a half of LTD time (TL), it starts to light and simultaneously the contact output starts. As for its operating time, refer to the Operating characteristic curves in Page 22, 24, 26 and 28.

## Neutral pole 50\% protection (N5)

When used OA equipment or DC power source that brings the third higher harmonic in 3 phases 4 wires circuit, is sometimes it electrically damages the other peripheral equipments due to the superposition of the third higher harmonic on Neutral pole.
This Neutral Pole $50 \%$ Protection (N5) is useful to protect the other peripheral equipments from such an electrical damage and also to prevent some troubles with the Pre-Alarm function (AP). Neutral pole overcurrent protection (operating at $100 \%$ of rated current) is already equipped with ETR as standard features.
But, if the operation at $50 \%$ of rated current is required on Neutral pole, it becomes available with this optional module unit.

## MCR switch (MCR-SW)

With this MCR switch, at the time of breaker closing from OFF to ON the INST (Instantaneous) characteristic works, and then after breaker is in closed (ON) position the INST characteristic becomes ineffective. This controlling function of INST characteristic is useful for the protection on the short-circuit fault at the time of closing and also for expanding the selective combination with branch breakers after closed.
The factory default setting of "INST/MCR pick-up current setting dial" is usually at "INST", so if the function of this MCR switch is required, the dial should be changed to "MCR".

## Temperature alarm (TAL)

When TAL sensor is installed in the breaker, temperature alarm is operative. When the temperature of main contact exceeds normal level, temperature alarm is indicated by LED on main setting module and also the output contact is made energize if power supply with output contact is installed. It is possible to know temperature rising which is caused by wear of main contact because TAL sensor is installed near main contact. When the temperature of main contact goes down to the normal level, temperature alarm turns off automatically.

## Field test device (Y-2005)

The electronic trip relay can be checked by this field test device when the breaker is at the test position or the disconnect position. The breaker will trip when tested with this device.

Y-2005 specification

| Test items | LTD, STD, INST, GFR, PAL |
| :--- | :--- |
| Range of signal output | Voltage signal equivalent to $1 \% \sim 2500 \%$ of Rated current $\ln$ (CT rating) |
| Dimensions | $220 \mathrm{~mm}(\mathrm{~W}) \times 150 \mathrm{~mm}(\mathrm{H}) \times 340 \mathrm{~mm}(\mathrm{D})$ |
| Time counter | $0.000 \sim 999.999 \mathrm{~s}$ |
| Input voltage | $100-240 \mathrm{~V} \mathrm{AC} 50 / 60 \mathrm{~Hz}$ |
| Weight | 4.5 kg |

## Electronic trip relay

## Additional functions

By adding the extension module unit in ETR, additional functions like measuring, display and communication become available.

List of extension unit (Option)

| Name | Type |  |
| :--- | :---: | :--- |
| Extension module | EX1 | Base module for display and interface function (indispensable) |
| Display module (relay attachment) | DP1 | Display module for ETR |
| Display module (panel attachment) | DP2 | Display module for panel board |
| VT unit | VT | Module for measuring voltage, active power and active energy |
| CC-Link® interface unit | BIF-CC | Interface unit for CC-Link® |
| PROFIBUS-DP interface unit | BIF-PR | Interface unit for PROFIBUS-DP |
| MODBUS® (RS-485) interface unit | BIF-MD | Interface unit for MODBUS® (RS-485) |
| I/O unit | BIF-CON | Module for breaker remote control (Interface unit is required) |
| Drawout position switch | BIF-CL | Switch for detecting the drawout position of the breaker <br> (Interface unit and I/O unit are required.) |

Note: The above extension units are not available for WS relay with DP3.

Electronic trip relay (ETR) Type designation breakdown

## Extension module (EX1)

This is the base module that provides various additional functions when combined with Display
 module (DP1 / DP2), Interface unit (BIF-CC / BIF-PR / BIF-MD) and VT unit (VT).

1 Various measuring elements, high measuring accuracy
By adopting high-performance ASIC, various measuring elememts (load current, voltage, energy, harmonics, etc.) and high measuring accuracy are attained. Refer to page 38 for more details.

## 2 Communication function

With the advanced internal communication function of this EX1 module, it is achieved rapid transmission of data between ETR and Displays or Interface units. Besides, it can be extended the function by connecting with Max. 2 display modules and 1 interface unit in parallel.

## Display module (DP1/DP2)

This is the module for display and setting of the various information like measured value, trip and alarm status, ETR status for display and output contacts setting etc...

1 Multi display of measuring element
It enables to easily monitor the comparison of each measuring element with its multi display (4 phases multi display of load current and voltage) on one screen.

## 2 Two-color back light

Under trip or alarm, back light color changes from green to red automatically, which visually shows an abnormal situation.

## 3 Graphical display

By adopting dot matrix type LCD, graphical display such as bar graph display of load current, harmonic currents and characteristic curve are available.

There are 2 types of display module. One is the ETR attachment type (DP1). The other is the
 panel attachment type (DP2), which can be connected to extension terminals of control circuit with 2 m cable. 2 units of display modules (DP1 and DP2) can be attached on one breaker. (As for outline dimensions of DP2, refer to page 55.)

## Note;

- Extension module (EX1) is required.
- VT unit (VT) is required to display the measured data except load current.

## VT unit (VT)

## Option

VT unit enables to measure voltages, powers, energies, harmonic currents and etc.

by connecting the ETR with Extension module (EX1).
(outline dimensions are shown in page 56.)

Note;

- The length of the cable attached for VT unit is 2 m .

## Electronic trip relay

Network

## Interface unit (BIF-CC/BIF-PR/BIF-MD)

## Option

These Interface units can expand the future possibility in various communication and Intelligent control.

BIF-MD (MODBUS®(RS-485))

BIF-CON

## I/O unit (BIF-CON)

## Option

The Input \& Output Controlling Unit (BIF-CON) is available for the remote controlling and the remote monitoring of the breaker condition through the various network systems.
With this BIF-CON unit in addition to the Interface Unit, it becomes possible to control the breaker remotely, like a ON or OFF operations or Spring-charging.

| Function | Description | Note |
| :--- | :--- | :--- |
| Control | Breaker ON operation | 1a contact for Closing coil (CC) |
|  | Breaker OFF operation | 1a contact for Shunt trip device (SHT) <br> (not applicable for 380-500V AC rating) |
|  | Spring charge | 1a contact for Motor charging (MD) |
|  | Digital Input (DI) monitoring | For BIF-CC and BIF-MD, Max. 3 contacts <br> monitoring are available. <br> For BIF-PR, 1 contact monitoring is available. |

## Drawout position switch (BIF-CL)

## Option

With this Drawout position switch (BIF-CL) in addition to Interface unit and I/O unit (BIF-CON), the remote monitoring of draw-out position becomes available for the breaker draw-out type.

| Function | Description | Note |
| :--- | :---: | :---: |
| Monitor | Breaker Drawout position | Position : Connect or Test or Disconnect |

BIF-CL

O : can be displayed by DP1/DP2/DP3 : can be displayed and set by DP1/DP2

## Electronic trip relay

Electronic trip relay circuit diagram

(1) Power supply CT

Energy is supplied for the operation of the overcurrent tripping and ground fault tripping(GFR) function of the electronic trip relay.

## (2) Current sensor coil

The current in each phase flowing through the breaker is detected. An air core coil which has good linearity is adopted.

## (3) Power supply circuit

This part converts power supply CT energy to constant voltage for respective circuits in the ETR.
(4) ASIC

This ASIC ampplifies the signal detected by the current sensor coil and the detected signal of ground fault current which is vector composed of the detected signals of each phase.
(5) Microprocessor

The microprocessor integrates each phase current waveform from the ASIC and performs processing for overcurrent protection and others.
(6) Characteristic setting module

The module for the characteristic setting of the ETR.
(7) Several LEDs

The load current LED gives a figure of current in percent by CT energy.
Trip indicator and pre-alarm are indicated by control power supply.
RUN and ERR. LED indicate breaker's condition by control power supply or ten-odd percent of CT energy.

## (8) Power supply with contact output

This outputs contact signals of fault cause (including pre-alarm) and an other alarms.
A control supply is necessary for this function.

## Setting procedure

1 Prepare a small flat tipped screwdriver.

2 Insert the flat tipped screwdriver into the opening of the ETR cover. Then, lightly turn the screwdriver to the upside as shown in the left figure, and the ETR cover will open.

3 There are two kinds of switches for characteristics setting and for trip indicator reset. They should be used as follows.
(1) Adjustable in steps

Rotary code switch is used. Do not set the switch at points between steps. The setting value is the same when the switch is positioned at the thick line. (Set the switch with a torque of $0.02 \mathrm{~N} \cdot \mathrm{~m}$ or below.)
Note) If the switch is set at points between steps, the characteristics setting value will be decided at either end of steps.
(2) Push-button

This is for temporary operation, and press it with force of 3 N or less.

4 For WS relay with DP3, there is a slide type switch (Frequency selector switch) as the left side picture shows.
(1) Frequency selector switch

Do not set the switch at points between the slide.
When operating the switch, use a flat tipped screwdriver of the following size.

5 When the characteristic is set up, use a device like a field tester, etc to make sure that the required characteristic has been set.

6 At sealing, seal the ETR cover by using the sealing hole at the top of the ETR cover.

## Wiring diagram

- The following diagram shows the case that accessories are fully equipped.

Accessory Symbols

| SHT | Shunt tripping device |

## Control circuit terminal block Terminal placement

| VT ${ }_{\square}^{\text {V }}$ vT unit | N1 | Z1 | RS1 | 513 | 564 | 544 | 524 | P1 | 97 | C1 | A1 | DT1 | D1 | 413 | U1 | 51 | 41 | 31 | 21 | 11 | 53 | 43 | 33 | 23 | 13 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | N2 | Z2 | RS2 | P4 | 574 | 554 | 534 | P2 | 98 | C2 | A2 | DT2 | D2 | 414 | U2 | 52 | 42 | 32 | 22 | 12 | 54 | 44 | 34 | 24 | 14 |

Extended terminal

Fig. 1

UVT controller wiring

| 100-120V AC type <br> 200-240V AC type <br> DC types | $380-460 \mathrm{~V}$ AC type |
| :--- | :--- |
|  |  |

Note;

- For the drawout type, the cables should have the length which allow the control circuit terminal block to be moved to the left or right by 5 mm .
- When a coil load is connected in the same control circuit as the ETR, surge absorbers are required to absorb the surge voltage.
- OCR alarm (AL)

The contact output of the OCR alarm (Standard type AL) is the one-pulse output and the output time is $30 \sim 50 \mathrm{~ms}$.
For this reason, this output needs self-holding circuit.

- For Power supply type P3 and P4, the high sensitive relay used in contact output may cause the chattering noise (wrong output of 1 ms level) during ON and OFF operation, depending on the Panel placing condition. When it is used in the quick responsive sequence, the filter circuit of a few milli-second (ms) should be provided or the double reading sampling should be implemented.
- Closing coil (CC)

As CC is one-pulse driven, it is not necessary to insert AXb for burning prevention purposes. Inserting AXb will cause anti-pumping function to be ineffective.

- Under voltage trip device (UVT)

Use the switch that can open and close 150 V DC, 0.5 A for remote trip.
Remote trip terminal has short bar at shipment, so remove it before using this function. Disconnect the voltage input wires during dielectric testing of main circuit.

- Since some terminals are polarized, the wiring should be done correctly as the polarity shown in the wiring diagram when the control voltage is DC. Auxiliary switch (AX) Standard type has no polarity.
- Alarm reset (Terminal: RS1 and RS2) is available only for Power supply type P3, P4 and P5. For Power supply type P1 and P2, it can not be reset from the Control circuit terminal block (RS1 and RS2).
- Alarm contacts (Terminal :513~ 574 ) are available only for power supply type P3, P4 and P5. For output contacts, refer to page 20 Note2.

## Technical information

## Pre-cautions when making connections

Use M12 bolts, plain washers, and spring lock washers to connect the conductor. There are various sizes in plain washers, but use 24 mm or smaller outer diameter washers. The washers may overlap if larger sized washers are used. It is recommended to apply silver plating on the contact surface of the conductor which is used to connect with the terminal of circuit breakers in order to prevent the increase of contact resistance due to moisture, etc. Tin plating or nickel plating may be applied, but quickly connect with the circuit breaker terminal if nickel plating is applied because nickel plating is less resistant to sulfur dioxide gas.
Clean the contact surface and securely tighten the bolts with a correct torque (M12: 40 to 50 $\mathrm{N} \cdot \mathrm{m}$ ).
The terminal which is applicable to connect the conductor is different depending on the shape of the terminal. Refer to the outline dimensions of P. 43 to P. 52.

Standard tightening torque

| Screw size | Tightening torque(N-m) |
| :---: | :---: |
| M12 | $45 \pm 5$ |

Since fault current flowing through the conductors causes large electromagnetic forces, the conductors should be secured firmly, using the values in the below table as a reference. Max. distance between fixing support and ACB bus bar should be less than 200 mm .

Electromagnetic force in N per 1m conductor (in the case of three phase short circuit)

| $\begin{gathered} 4000 \\ \binom{\text { AE4000-SWA }}{\text { Drawout type }} \end{gathered}$ |  | 4 | $150 \times 10$ |
| $\begin{gathered} 4000 \\ \binom{\text { AE4000-SWA }}{\text { Fixed type }} \end{gathered}$ |  | 3 | $150 \times 10$ |
| $\begin{gathered} 4000 \\ \text { (AE4000-SW) } \end{gathered}$ |  | 4 | $100 \times 10$ |
| 5000 |  | 4 | $150 \times 10$ |
| 6300 |  | 4 | $200 \times 10$ |

The left table shows the suitable connecting conductor size based on IEC 60947-1, which is assured from the test under Ambient temp. $40^{\circ} \mathrm{C}$, Open air and testing configuration as shown in the following drawing.

*1 The temperature rise of rated current 3200A conforms to the requirement of IEC60947-1 for the connecting conductor size of a rated current 3150A. In case of more than 3200A, conductor sizes are not defined in IEC 60947-1.

## Insulation distance

When a short-circuit current is interrupted, discharged hot gas blows out from the exhaust port of the arc extinguishing chamber, so provide a clearance as shown in the following table.

Note1:On the fixed type, maintenance is possible with
following clearance.

Note1: 300 mm or more clearance is necessary to inspect the arc-extinguishing chamber and contacts
Note2 : The wiring space reguired for the control terminal block.
Note3 : When using mechanical interlock, door interlock, etc., dimension B becomes larger.

## Service conditions

## 1. Normal service condition

Under ordinary conditions the following normal working conditions are all satisfied, the AE Series air circuit breaker may be used unless otherwise specified.

1. Ambient temperature

A range of max. $+40^{\circ} \mathrm{C}$ to min. $-5^{\circ} \mathrm{C}$ is recommended.
And the average over 24 hours must not exceed $+35^{\circ} \mathrm{C}$.
2. Altitude

2,000m (6,600 feet) or less
3. Environmental conditions

The air must be clean, and the relative humidity must be $85 \%$ or less at max. temp. $+40^{\circ} \mathrm{C}$. Do not use and store in atmospheres with sulfide gas and ammonia gas etc. ( $\mathrm{H} 2 \mathrm{~S} \leq 0.01 \mathrm{ppm}, \mathrm{SO}_{2} \leq 0.1 \mathrm{ppm}, \mathrm{NH}_{3}<$ a few ppm.)
4. Installation conditions

When installing the AE Series air circuit breaker, refer to the installation instructions in the catalogue and instruction manual.
5. Storage temperature

A range of max. $+60^{\circ} \mathrm{C}$ to min. $-20^{\circ} \mathrm{C}$ is recommended to be stored.
And the average over 24 hours must not exceed $+35^{\circ} \mathrm{C}$.
6. Guideline for replacement

Within approx. 15 years. Please refer to the instruction manual.

## 2. Special service conditions

In case of special service condition, service life may become shorter in some cases.

1. Special environmental conditions

High temperature and/or high humidity corrosive gas
2. High ambient temperature

If the ambient temperature exceeds $+40^{\circ} \mathrm{C}$, the uninterrupted current rating will be reduced. Since the derating value is different depending on the applicable standard, refer to P60.
3. High altitude

Since the heat radiation rate is reduced for use at the $2,000 \mathrm{~m}$ or higher, accordingly the operating voltage, continuous current capacity and breaking capacity are derated. Moreover the insulation durability is also decreased owing to the atmospheric pressure.
Please inquire us for further detail.

## Guarantee

## 1. Free guarantee period

The free guarantee period of the product is one year from the day of purchase.

## 2. Scope of guarantee

(1) We will repair the product free of charge within the guarantee period on condition that it has been used under the standard working conditions in conformity with the operating conditions, operating procedures, environmental conditions and instructions specified in the catalogs, manuals and caution labels on the product body.
(2) In the following cases, the product will be repaired at your expense even within the free guarantee period.

- Failure caused by your improper storage or handling, carelessness or negligence
- Failure caused by inadequacies of installation
- Failure caused by mis-operation or improper modification
- Failure caused by external factors due to acts of God, such as fire and abnormal votage, and natural disasters, such as earthquake, windstorm and flood
- Failure caused by reasons that could not be foreseen on the level of science and technology at the time of delivery The term "guarantee" used in this section refers to the guarantee only of the delivered product. We are not liable to compensate for any damage induced by the failure of the delivered product.

## 3. Repair parts supplying period

The supply of the repair parts is warranted for 5 years after discontinuation of the production. The supply is terminated as soon as the repair parts run out after the 5 years.

## Technical information

## Internal resistance, reactance and power consumption (per pole)

| Type | Connection | Internal resistance ( $\mathrm{m} \Omega$ ) | Reactance ( $\mathrm{m} \Omega$ ) | Power consumption (W) |
| :---: | :---: | :---: | :---: | :---: |
| AE630-SW | Fixed type | 0.020 | 0.099 | 8 |
|  | Drawout type | 0.031 | 0.147 | 12 |
| AE1000-SW | Fixed type | 0.020 | 0.095 | 20 |
|  | Drawout type | 0.031 | 0.136 | 31 |
| AE1250-SW | Fixed type | 0.020 | 0.088 | 31 |
|  | Drawout type | 0.031 | 0.135 | 48 |
| AE1600-SW | Fixed type | 0.020 | 0.099 | 51 |
|  | Drawout type | 0.031 | 0.129 | 79 |
| AE2000-SWA | Fixed type | 0.020 | 0.120 | 80 |
|  | Drawout type | 0.030 | 0.161 | 120 |
| AE2000-SW | Fixed type | 0.010 | 0.076 | 40 |
|  | Drawout type | 0.018 | 0.122 | 72 |
| AE2500-SW | Fixed type | 0.010 | 0.084 | 63 |
|  | Drawout type | 0.018 | 0.128 | 113 |
| AE3200-SW | Fixed type | 0.009 | 0.068 | 92 |
|  | Drawout type | 0.015 | 0.096 | 154 |
| AE4000-SWA | Fixed type | 0.011 | 0.111 | 176 |
|  | Drawout type | 0.015 | 0.106 | 240 |
| AE4000-SW | Fixed type | 0.009 | 0.070 | 144 |
|  | Drawout type | 0.011 | 0.084 | 176 |
| AE5000-SW | Fixed type | 0.009 | 0.061 | 225 |
|  | Drawout type | 0.011 | 0.081 | 275 |
| AE6300-SW | Fixed type | 0.008 | 0.059 | 318 |
|  | Drawout type | 0.009 | 0.080 | 357 |

(Note) The above values are applicable for one pole.
The above values are measured values and can be used only for reference.

## Deratings by ambient temperature

(Table 1) Deratings of Max. rated current by ambient temperature

| Standard | IEC60947-2, JIS C 8201-2-1 (Standard:40 $\left.{ }^{\circ} \mathrm{C}\right)$ |  |  |  |  |

| AE6300-SW | 6300 | 6300 | 5750 | 5500 | 5200 |

(Table 2) Deratings of Max. rated current by ambient temperature with Extension module, Display and Network
In case extension module (EX1), display (DP1) and network are attached, the following derating values shown in this table are applied.
(A)

| Standard | IEC60947-2, JIS C 8201-2-1 (Standard:40 ${ }^{\circ} \mathrm{C}$ ) |  |  |
| :---: | :---: | :---: | :---: |
|  | LR, BV, DNV GL, ABS, NK, CCS (Standard:45 ${ }^{\circ} \mathrm{C}$ ) |  |  |
| Ambient Temperature | $40^{\circ} \mathrm{C}$ | $45^{\circ} \mathrm{C}$ | $50^{\circ} \mathrm{C}$ |
| AE630-SW | 630 | 630 | 630 |
| AE1000-SW | 1000 | 1000 | 1000 |
| AE1250-SW | 1250 | 1250 | 1250 |
| AE1600-SW | 1600 | 1600 | 1440 |
| AE2000-SWA | 2000 | 1900 | 1700 |
| AE2000-SW | 2000 | 2000 | 2000 |
| AE2500-SW | 2500 | 2500 | 2500 |
| AE3200-SW | 3200 | 3200 | 2880 |
| AE4000-SWA | 4000 | 3800 | 3600 |
| AE4000-SW | 4000 | 4000 | 3750 |
| AE5000-SW | 5000 | 5000 | 4750 |
| AE6300-SW | 6300 | 5750 | 5200 |

[^2] (at brandnew product), when breaker and bus bar are installed in open air.
Connection bus bar is according to IEC60947-1. For AE3200-SW, AE4000-SWA, AE4000-SW, AE5000-SW and AE6300-SW, it is required to follow the manufacturer recommended size shown in Page 57.
As for ambient temperature exceeding $60^{\circ} \mathrm{C}$, please inquire us.

## Technical information

## Discrimination table

AE-SW Series air circuit breakers provide easy selective co-ordination with branch circuit breakers. For selective co-crdinations, refer to the following table.

230V AC sym kA

| Branch |  |  | AE-SW |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

-The values in the table represent the max.rated current for both Series AE-SW air circuit breakers and branch breakers, and the selective co-ordination applies when the AE-SW series air circuit
breakers instantaneous pick up is set to maximum.
The numerals shown in parentheses are for AE-SW with MCR.(When set MCR).

Note 1: For AE630-SW and AE2000-SW Low rating type, please specify CT rating. Refer to Page 9 and Page 20
Note2: There is a case to be derated by ambient temperature. Refer to Page 60.
Note 3: As for the terminal for AE2000-SWA, AE4000-SWA and AE4000-SW~AE6300-SW, Vertical terminal type only is available. (FIX-VT or DR-VT)
Note 4: Refer to Page 11 and Page 43-45.
Note5: This setting is available for change by customer later. A preliminary setting of CL at factory shipment is as follows.
CL1:1C CL2:1C1D CL3:1C1T1D CL4:2C1T1D
Note6: Not available for AE630-SW with CT rating : 250A or 315A or 500A.
Note 7: Not available for WB1, WB2 and WB3 Main setting module.
N5 optional setting module is used for 3phase 4wires system. (4Pole breaker or 3pole breaker with Neutral CT)
Note 8: Neutral CT is required for Ground fault or Neutral pole protection, when 3 Pole breaker is used for 3 phase 4 wires system.
Note9: For Earth leakage protection, it is required External ZCT.
Note10: 24 V DC and 48 V DC are not available for AE4000-SWA 4 P and AE4000-SW~AE6300-SW.
Note11: The combined installation of DI and MI 3 is not available
Note12: Some module types are not provided BA. Refer to Page15.
Note13: Power Supply comes from the top terminals.
Note14: Power Supply comes from the bottom terminals.
Note15: Current capacity of the neutral poles
HN: $50 \%$ of the rated current
FN: $100 \%$ of the rated current (See page 47, 52 for the outline and dimensions.)

HN: $50 \%$ of the rated current
FN: $100 \%$ of the rated current (See page 47, 52 for the outline and dimensions.)

# Ordering information for MITSUBISHI AE-SW series air circuit breaker (General use…WS relay with Ampere Meter and Fault Memory "DP3") 

Note1: For AE2000-SW, low rating current types are available.
Low rating types (250A, 315A, 500A) are not available for AE630-SW.
Note2: There is a case to be derated by ambient temperature. Refer to Page 60.
Note 3: As for the terminal for AE2000-SWA, AE4000-SWA and AE4000-SW~AE6300-SW, Vertical terminal type only is available. (FIX-VT or DR-VT)
Note4: This setting is available for change by customer later. A preliminary setting of CL at factory shipment is as follows.
CL1:1C CL2:1C1D CL3:1C1T1D CL4:2C1T1D
Note5: Neutral CT is required for Ground fault or Neutral pole protection, when 3-pole breaker is used for 3phase 4wire system.
Note6: 24V DC and 48V DC are not available for AE4000-SWA 4P or AE4000 to 6300-SW.
Note7: The combined installation of DI and MI3 is not available.
Note8: Some module types are not provided BA. Refer to Page15.
Note 9: Current capacity of the neutral poles
HN: $50 \%$ of the rated current
FN: $100 \%$ of the rated current (See page 47, 52 for the outline and dimensions.)
Note10: If MCR switch is ordered, INST/MCR characteristic will be installed
INST/MCR characteristics can be switched using a setting dial.
Note11: For WS relay with ampere meter and fault memory (DP3),
ETR including optinal setting such as "G1" has integrated structure
So, optinal setting such as G1 for WS relay with DP3 should be specified before ordering as those parts cannot be installed with ETR after factory shipment.

[^1]:    The table and the figure include both optional display and MCR.
    For WB relay, when Pre-alarm current Ip is set at "OVER", the Ip value is "Ir x 1.15".

[^2]:    The above table shows the maximum rated current per each ambient temperature for drawout type breaker with vertical connection

[^3]:    The values in the table represent the max.rated current for both Series AE-SW air circuit breakers and branch breakers, and the selective co-ordination applies when the AE-SW series air circuit
    breakers instantaneous pick up is set to maximum.
